Weekly Cybersecurity Tips

Many neglect smartphone security, but with both business and personal phones containing so much sensitive information, users should do everything possible to keep these devices safe.

Here a few basic steps to following when security smartphones:

- Turn on your screen lock and use it at all times
- Use encryption to protect confidential information stored on your phone
- Turn your Wi-Fi and Bluetooth off when you not in use
- Install an antivirus for smartphones
- Check permissions before installing an app
- Back up your data
